

### 3.4 Substitution Method – Solving Systems of Equations

Algebra 1

Solutions

Practice

Create a system of equations for each problem, but don't solve. Identify each variable's meaning.

1. Maria and Carlos are selling wrapping paper for a school fundraiser. Customers can buy rolls of plain wrapping paper and rolls of shiny wrapping paper. Maria sold 9 rolls of plain wrapping paper and 6 rolls of shiny wrapping paper for a total of \$204. Carlos sold 1 roll of plain wrapping paper and 8 rolls of shiny wrapping paper for a total of \$140.

$$\begin{array}{l} p = \text{cost of plain rolls} \\ \text{(variable)} \quad \text{(what the variable represents)} \end{array}$$

$$\begin{array}{l} s = \text{cost of shiny rolls} \\ \text{(variable)} \quad \text{(what the variable represents)} \end{array}$$

Equation 1:  $9p + 6s = 204$

Equation 2:  $p + 8s = 140$

2. A plane traveled 900 miles to Cleveland and back. (900 miles each way for a total of 1800 miles.) The trip there was with the wind and it took 9 hours. The trip back was into the wind and took 18 hours.

$$\begin{array}{l} w = \text{wind speed} \\ \text{(variable)} \quad \text{(what the variable represents)} \end{array}$$

$$\begin{array}{l} p = \text{plane speed} \\ \text{(variable)} \quad \text{(what the variable represents)} \end{array}$$

Equation 1:  $900 = (p + w) \cdot 9$

Equation 2:  $900 = (p - w) \cdot 18$

Solve each system of equations using substitution.

3.  $2x + 8y = -16$   
 $y = x - 12$   
 $2x + 8(x - 12) = -16$   
 $2x + 8x - 96 = -16$   
 $10x = 80$   
 $x = 8$   
 $y = (8) - 12$   
 $y = -4$

4.  $C = 4r - 3$   
 $2C - 8r = -6$   
 $C = 4r - 3$   
 $2(4r - 3) - 8r = -6$   
 $8r - 6 - 8r = -6$   
 $-6 = -6$   
 Infinite solutions

5.  $-y = -3x$   
 $6x + 3y = 15$   
 $y = -2 + 3x$   
 $6x + 3(-2 + 3x) = 15$   
 $6x - 6 + 9x = 15$   
 $15x - 6 = 15$   
 $15x = 21$   
 $x = \frac{7}{5}$   
 $y = -2 + 3(\frac{7}{5})$   
 $y = 2$

6.  $4l + w = -2$   
 $4l = -8 - 4w$   
 $w = -2 - 4l$   
 $4l = -8 - 4(-2 - 4l)$   
 $4l = -8 + 8 + 16l$   
 $-12l = 0$   
 $l = 0$   
 $w = -2 - 4(0)$   
 $w = -2$

7.  $c - 3d = 1$   
 $-3c = -9d$   
 $c = 1 + 3d$   
 $-3(1 + 3d) = -9d$   
 $-3 - 9d = -9d$   
 $-3 = 0$   
 No solution

8.  $4m + 4n = -12$   
 $2n = -2 - m$   
 $m = -2 - 2n$   
 $4(-2 - 2n) + 4n = -12$   
 $-8 - 8n + 4n = -12$   
 $-8 - 4n = -12$   
 $-4n = -4$   
 $n = 1$   
 $m = -2 - 2(1)$   
 $m = -4$

9.  $3x + 6y = -15$   
 $x = -5 - 2y$   $\rightarrow$   
 $x = -5 - 2y$

$$3(-5 - 2y) + 6y = -15$$

$$-15 - 6y + 6y = -15$$

$$-15 = -15$$

Infinite  
Solutions

10.  $-a = 1 - 2h$   
 $8h + 4a = 6$   $\rightarrow$   
 $a = 2h - 1$

$$8h + 4(2h - 1) = 6$$

$$8h + 8h - 4 = 6$$

$$16h = 10$$

$$h = \frac{5}{8}$$

$$a = 2\left(\frac{5}{8}\right) - 1$$

$$a = \frac{5}{4} - \frac{4}{4}$$

$$a = \frac{1}{4}$$

11.  $y = 4 + 2x$   
 $4x - 2y = 0$

$$4x - 2(4 + 2x) = 0$$

$$4x - 8 - 4x = 0$$

$$-8 = 0$$

No Solution
