## Use a sentence to explain the meaning of the slope and $y$-intercept of the best fit line for each situation.

1. Hewey, Dewey and Louie are keeping track of their weight over time where $w$ stands for time in weeks and $p$ stands for their weight in pounds.

HEWEY $\quad p=-\frac{7}{2} w+180$

$$
\begin{aligned}
& \text { slope }= \\
& y \text {-intercept }=
\end{aligned}
$$

DEWEY

$$
\begin{array}{ll}
p=2 w+140 & \text { slope }= \\
& y \text {-intercept }=
\end{array}
$$

LOUIE

$$
\begin{array}{ll}
p=1.75 w+150 & \text { slope }= \\
& y \text {-intercept }=
\end{array}
$$

## Use the scatterplot and equation for the best fit line/curve to answer the following.

2. The scatterplot shows the percent chance of rain and the attendance at a Six Flags amusement park. The equation of the best fit line is $y=-4.5 x+950$ and is shown graphed below.

a. Use a sentence to explain the meaning of the slope in this context.
b. The $r$-value for this best fit line model is -0.91 . Explain what this means.

Use the data to find the best fit linear regression and correlation coefficient. Round to nearest hundredth.
3.

| $\boldsymbol{x}$ | $\boldsymbol{y}$ |
| :---: | :---: |
| 20 | 140 |
| 18 | 121 |
| 15 | 107 |
| 22 | 158 |
| 25 | 172 |
| 28 | 194 |
| 13 | 92 |
| 31 | 201 |

| EQUATION |
| :---: |
| Correlation Coefficient |

Explain the meaning of the correlation coefficient.
4.

| $\boldsymbol{x}$ | $\boldsymbol{y}$ |
| :---: | :---: |
| -12 | 480 |
| -9 | 421 |
| -7 | 304 |
| -2 | 397 |
| 0 | 487 |
| 3 | 356 |
| 7 | 311 |
| 12 | 385 |

EQUATION
$\qquad$

Correlation Coefficient

Explain the meaning of the correlation coefficient.

## Sketch the following.

5. A residual plot that indicates the linear regression model is appropriate.

6. A residual plot that indicates the linear regression model is NOT appropriate.

## Construct a scatterplot and answer the questions.

7. Length of a person's leg bone with their given height.

| Femur length <br> $(\mathbf{c m})$ | 50.1 | 48.3 | 45.2 | 44.7 | 44.5 | 42.7 | 39.5 | 38 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Height <br> $(\mathbf{c m})$ | 178.5 | 173.6 | 164.8 | 163.7 | 168.3 | 165 | 155.4 | 155 |

a. Find and graph a linear regression equation that models the data.
(Round to nearest hundredth)
EQUATION: $\qquad$

## CORRELATION COEFFICIENT:

b. Use a sentence to explain what the slope means.
c. Explain what the correlation coefficient means.
d. The graph shows the residual plot for the best fit line.

Is this linear regression a good model? Explain why or why not.

## Answers to Corrective Assignment 5.3

| 1. HEWEY | DEWEY | LOUIE |
| :---: | :---: | :---: |
| Slope: loses 7 pounds every 2 weeks | Slope: gains 2 pounds per week | Slope: gains 1.75 pounds each week |
| $y$-int: originally weighed 180 pounds | $y$-int: originally weighed 140 pounds | $y$-int: originally weighed 150 pounds |
| 2. a. Attendance goes down 4.5 people every $1 \%$ increase in chance of rain. <br> b. Strong negative correlation | 3. $\begin{aligned} & y=6.35 x+11.55 \\ & r=0.99 \end{aligned}$ <br> Very strong positive correlation | 4. $\begin{aligned} & y=-3.1 x+389.52 \\ & r=-0.37 \end{aligned}$ <br> Weak negative correlation |
| 5. random points, no pattern | 7. a. $\begin{aligned} & y=1.92 x+80.68 \\ & r=0.97 \end{aligned}$ <br> b. Femur length increases 1.92 cm for every 1 cm of height |  |
| 6. not random points, pattern | c. Very strong positive correlatio <br> d. Yes, indicates a good model. | ints are random, no pattern. |
